Data centers with a hot/cold aisle system tend to be more energy ...

The Cold & Hot Aisle Containment system is retrofitable - making it ideal for improving the performance of older server rooms facing upgrades. It's also modular and scalable, which helps future-proof ...

Data centers opting for cold containment deliver cold air through a raised floor into the aisle. This air is contained in front of the cabinets, creating a homogeneous air plenum at the desired temperature.

A highly engineered data center cabinet solution that delivers fast, built-to-order configurability, best-in-class strength, and scalability regardless of the application.

Data centers with a hot/cold aisle system tend to be more energy-efficient than those without it. The system manages airflow and minimizes overheating, helping to lower cooling costs ...

By reducing hot/cold air mixing, you can raise supply and chilled-water setpoints, which decreases compressor and fan energy while maintaining safe server inlet temperatures.

With so many variables affecting airflow within a data center, it can be daunting to know where to start and how to get the most of airflow management improvements
