

CCSA High-Speed Optical Module Standard

Overview

In 2024, CCSA TC6 WG1 completed the Technical Requirements for N×400G Ultra-Long-Haul WDM. This standard specifies DWDM optical systems using QPSK modulation above 120 GBd. Simplify the network by replacing an OLT chassis with a router-deployed pluggable module. 6T pluggable optics powered by Cisco silicon photonics technology. Accelerate your migration to 100G and 400G and maximize the. At present, single-wavelength 100G/200G WDM systems have been commercially deployed on a large scale in operators' backbone networks, and single-wavelength 400G systems have moved from metropolitan area networks to backbone networks, becoming the focus of attention and application in the industry. As the single-channel transmission rate continues to rise, the application landscape in modern optical communication has witnessed a growing adoption of coherent optical transmission technology. 8Tbps of switching. MSA (Multi-Source Agreement) standards define the mechanical, electrical, and management interfaces of optical transceivers, enabling multi-vendor interoperability, supply chain flexibility, and large-scale network deployment.

CCSA High-Speed Optical Module Standard

The XPO pluggable module preserves the advantages of field pluggability, enabling quick replacement or upgrades of optical modules without servicing the entire switch and minimizing downtime.

To accommodate both high-power optical and dense copper solutions, the specification will define separate but compatible heatsink specifications for both optical and copper modules, allowing ...

Standardization organizations involved in ultra-high-speed optical transmission include the ITU-T Study Group 15 (SG15), the Optical Internetworking Forum (OIF), IEEE 802.3, and the China ...

Understanding MSA is critical for compatibility validation, cost optimization, and long-term network reliability. In high-speed fiber networks, MSA standards are the invisible framework that makes ...

MPS provides compact and comprehensive solutions that feature high efficiency and low ripple characteristics to meet the design requirements of high-speed optical module power supply solutions.

CCSA is a non-profit organization established by enterprises and institutes in China for carrying out standardization activities in the field of Information and Communications Technology (ICT) across ...

The 400ZR initiative, initiated by the Optical Internetworking Forum (OIF) in 2016, aims to standardize interoperable coherent optical transceiver interfaces suitable for power-efficient ...

CCSA TC6 WG4 has completed seven series of standards for 400G intensity modulation and phase modulation technologies in the past three years and initiated the standardization of 800G ...

The 1.6T optical module represents the latest optical advancements, significantly enhancing data transmission speeds and capacity. It currently supports two form factors, OSFP and OSFP-XD, to ...

Find the optical transceiver to fit your network
800G transceivers Get high-speed 800G modules for QSFP-DD or OSFP ports for AI and data center applications.
