

Cable trays are placed in the cable trench

Overview

Cable trays are above-ground systems that support and organize cables. The biggest difference is how they're installed—trays are exposed, trenches are buried. They offer long-term stability, making them ideal for areas where cables need to be shielded from weather, physical wear, or interference. On the other hand, maintain spacing or to keep cables in place when the tray is erect the minimum bend radius for cables as they exit the bottom of the cable tray. A rung spacing of 6 to 9 inches (150 to 230 mm) is preferable when the cable tray is used for instrumentation and control applications that require. An Electrical Worker is performing the task of pulling wire by hand. Which of the following is a best practice for this task?

a. The worker is running wire overhead while standing on the. Trenwa is the original manufacturer of precast concrete trench and offers the broadest line of proven trench systems.
