

Detection without fiber optic cable

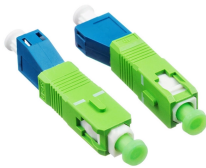

Overview

Allows you to detect traffic and measure signals anywhere on singlemode fibers without having to disconnect them. The Wilcom Model F6121R Ribbon Fiber Identifier is a lightweight, rugged, easy-to-use installation and maintenance instrument designed for fast, accurate identification and traffic testing of optical signals without cutting the fiber cable or interrupting service. By utilizing local detection. EXFO's handheld live fiber detectors don't disrupt traffic, nor damage or over-stress fibers, enabling efficient, accurate and reliable data acquisition. Pinpoint live and dark fibers and avoid unnecessary manipulations, saving time and eliminating guesswork. The LightBeat™ feature flashes the LED, indicating a powered-on.
