

# Installing a gigabit router on a 100 Mbps fiber optic connection

## Overview

When selecting a router for fiber optic internet, ensure it is a “fiber compatible router” with a Gigabit WAN port. Compatible router: Verify that your router supports fiber optic input (look for an SFP or WAN port labeled). For fiber, your router needs the right WAN connection, speed support, and Wi-Fi capabilities. This guide details the necessary physical and digital steps to connect your fiber line and activate your internet service. Understanding compatibility, potential limitations, and when an upgrade is necessary will ensure you get the most out of your high-speed connection. This guide will break down everything you. The two most common types of Ethernet speeds are Fast Ethernet (10/100Mbps) and Gigabit Ethernet (10/100/1000Mbps), which are more than enough for most people's local network uses. But as the internet access increases, the network speed decreases gradually since Ethernet cannot handle such heavy.
