## Liquid-cooled switch DML

The Q3450-LD liquid-cooling system features two parallel cooling loops operating concurrently. Liquid enters via two separate inlet ports and exits through two outlet ports.

This cooling methodology uses liquid cooling technology to ease the burden placed on air coolers by bringing liquid cooling to the rack and server level while operating within an air-cooled infrastructure.

The two types of liquid cooling used on a large scale in the data center field are cold-plate and submerged liquid cooling. Other types such as spray cooling have not been deployed on a ...
