

Location of the dedicated power distribution box for surveillance

Overview

The power supply boxes are easy to use; simply run your cabling and connect the 2-wire leads from the power portion of your Siamese cable by screwing them down into the screw-terminal panel inside the CCTV power box. A CCTV power supply box, also known as a power distribution box, allows surveillance system installers to easily manage the power to multiple CCTV cameras at a central point (usually at the location of the DVR). This allows your camera installation to be neater. Combined with RG59U siamese cable or video baluns, wiring becomes neater and easier to manage from one source. Similar to the ports that can connect several. In this video we will demonstrate how to connect a security camera to a surveillance DVR using BNC plug and play CCTV cables and a power distribution box.

Location of the dedicated power distribution box for surveillance
