

Method for fixing optical cables in ODF frame

Overview

There are horizontal and vertical plates for fixing cables in the rack cabinet, called breakout plates. This is the point where the sheath, central strength member, Kevlar, and tubes are secured, after which the cable sheath is removed, and the PVC tubes are directed into. An optical Distribution Frame (ODF) or patch panel is the starting point for optical cables, most commonly found in rack cabinets in Head End (HE)/Central Office (CO)/Point of Presence (POP)/Data Centre (DC) or smaller cabinets or enclosures. The ODF consists of a metal housing, cable entry ports.
