

Power supply structure of communication systems

Overview

The communication power supply system is composed of three parts: AC power supply system, DC power supply system and grounding system: AC power supply system consists of high-voltage power distribution station, step-down transformer, diesel generator, UPS and low-voltage power. The communication power supply system is composed of three parts: AC power supply system, DC power supply system and grounding system: AC power supply system consists of high-voltage power distribution station, step-down transformer, diesel generator, UPS and low-voltage power. Power factor corrected (PFC) AC/DC power supplies with load sharing and redundancy (N+1) at the front-end feed dense, high efficiency DC/DC modules and point-of-load converters on the back-end. A power efficient design is required that supplies both the higher voltage analog circuits and multiple. Telecom power supply systems form the backbone of modern telecommunications. Without them, communication services would falter during power outages or fluctuations. III 113 115 116 118 119 123 127 12 D. This article focuses on 80 W PAs with several PAs in the system.
