

## Telecom Fiber Optic Disk Chromatography

### Overview

3 standard, Optical Time Domain Reflectometer (OTDR), Optical Loss Test Set (OLTS), and chromatic dispersion (CD) and polarization mode dispersion (PMD) testing is required to perform full fiber characterization and ensure high network performance. Pulse broadening due to chromatic dispersion and the variation of. division multiplexing (DWDM) systems. However, before such upgrades can be made, operators must verify that the deployed fiber infrastructure meets certain performance and reliability requirements. In addition to conventional loss and continuity testing, three main parameters must be considered. Speed and accuracy are two key requirements of fiber optic networks carrying mission-critical communications, whether connecting communities or spanning continents.
